ECOLE SUPERIEURE DE GESTION, D'INFORMATIQUE ET DES SCIENCES
ACADEMIC YEAR: 2020-2021

Summative Evaluation/ IRT1 **Duration: 2H00** **Examiner: Dr. Edouard Koba**

COMPUTER SCIENCE ENGLISH

I- READING COMPREHENSION

Text: Desktop computing

1. Companies of every size have emphatically joined the computer age. Some companies provide each employee with a terminal that is connected to large mainframe computer or a somewhat smaller minicomputer, allowing a number of people access to the same data. Some companies put a separate microcomputer on each desk, allowing employees to work independently. And still other companies have intelligent workstations that provide users with a more powerful computing system. Computers can integrate the office environment, linking individual employees with each other, with other companies, and even with the rest of the world through distribution services and information networks.

2. The main uses for these workstations range from word and data processing to design and decision support. In word processing, documents are drafted, polished, and produced on the computer. In data processing raw numbers –sales, costs, inventories, and so on – are entered into a database, manipulated, analyzed, and transformed into information that the organization can use to produce more efficiently and market more effectively. In design and decision support, modelling of products, organizations and operations can be stimulated to help designers and managers see what might happen under various circumstances.

3. Software is what makes a computer so versatile. For example, with the purchase of various programs, a single computer can be used to produce letters, calculate statistics from raw data, and keep mailing lists. A great selection of ready-to-use software is now available for microcomputers. Minicomputers and mainframe computers often use software that is specially designed to meet organization's unique needs.

4. One business function of computers is desktop publishing. A combination of word processing and graphics, desktop publishing allows the production of polished newsletters, catalogs, and reports. Blocks of texts, special headlines, and diagrams can be laid out together on-screen so that the user can see exactly what come out on the printer (WYSIWYG –''wizywyg,'' or ''what you see is what you get''). Laser printers produce pages that look more like professionally typeset materials than like the "connect dot" computer printouts of the past. Although a desktop publishing system cannot yet substitute for the artistic expertise of a professional designer or match the quality of professional typesetting equipment, it does give organization a quick and relatively inexpensive alternative to printing.

In business communication today, pp 590-591(Bybovée, C. L. & Thill, V. J (1992).

QUESTIONS

A. ***Answer by T (true) or F (false) according to the text. Write down the number and T or F only for each statement.*** **(***18 points***)**

1. Not every company uses computers.
2. A computer terminal tells users that a computer is bankrupt and cannot continue business.
3. A minicomputer and a microcomputer play the same role.
4. Computers can allow the company to be in touch with the whole world.
5. Raw numbers are not relevant effective marketing.
6. Many companies are no longer going to printing house for the production of catalogues.

B. Answer the questions with information from the text under comprehension **(***12 points***)**

1. What is the difference between and a mainframe computer and a microcomputer?
2. Give three main uses for computers in a company or business.
3. Why is it said that a computer is versatile?

C. Translation **(***10 points***)**

Translate into French: From:''In data processing, raw numbers ….down to ….under various circumstances.

II LINGUISTIC PERFORMANCE

A. Match the words or phrases in the word-box with the definition under ListB and write down numbers and letters only. **(***10 points***)**

Word-box

a- computer; b-word-processor; c-hardware; d-mouse; e-hard disk; f-floppy disk ; g- cursor ; h-software ; i-direct access ; j- random access.

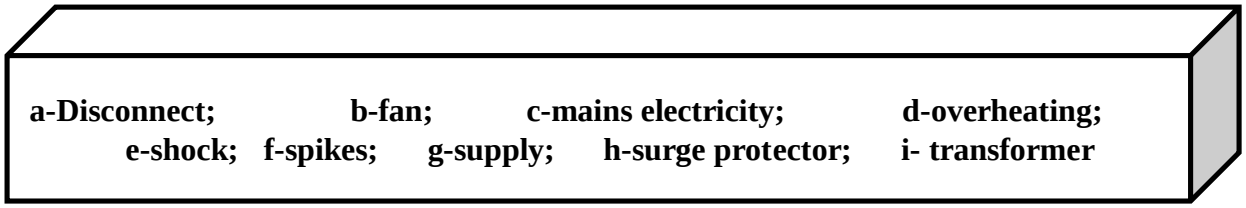

List-B

1. A flexible disc/diskette used for recording and storing data in a form that a computer can read.
2. A movable dot on a computer screen that indicates a particular position.
3. The facility of getting data immediately from any part of a computer file.
4. Data and programs, not forming tangible part of a computer, but used when operating it.
5. An electronic machine for storing, analyzing and processing data and information.

6. The process that allows information in a computer to be stored and recovered quickly without reading items stored previously.
7. Mechanical or electronic parts of a computer.
8. A sealed magnetic device fitted into a computer on which large amounts of data can be recorded.
9. A small device moved by hand to control the movement of the cursor on the screen.
10. Any application software for typing, recording, correcting and printing texts.

B. Fill in the gap in each sentence with the most appropriate word or phrase from the word-box. Don't copy the text; write down numbers and letters. One sentence can have more than one selection so you can write for instance: 3 ⟶g; f; c (*10 points***)**

Word-box

Sentences

1. Laptops are powered by batteries or _____.
2. Mains electricity is converted to lower voltage by a_____.
3. A _____ protects electronic equipment from damage caused by power _____.
4. If you remove the cover from a computer, make sure you _____ the electricity _____. Otherwise, you may get an electric _____.
5. The computer is cooled by a _____. This prevents the processor from _____.

C. ***Ask the most appropriate question based on the underlined words or phrase.*** **(***10 points***)**

1. The government has invested **billions of Nairas** in the fight against Covid-19.
2. Mr. Bob is a **Head of Computing Department** in Trump Tower Company.
3. A manager is **someone who implements decisions in a business**.
4. I occupied this position **from 2010 to 2019.**
5. Students go to school **to secure a good job in the service industry.**

D. ***Use the correct form or tense of the bracketed verbs. Write down just the number and the correct verb form and tense.*** **(***10 points***)**

1. It is long time since this power plant **(to sell)** to westerners.
2. If John **(to know),** he would not have married this unbearable and *faro-faro* wife.
3. These policeman **(to regulate)** the traffic for four hours now.

4. The new elected president has done nothing for about three months but **(to abrogate)** decrees of the former regime.
5. You really confirm that cars **(not to make)** in your country.

III <u>COMPOSITION</u> (*20 points*)

Write a-twenty-line paragraph ***(maximum)*** in which you discuss the major advantages of computer science in today's world.
